Inflatable System

Air Cushioning System

Efficiency, flexibility, product protection, and total packaging savings are in the bag with the AirSpeed™ 3000 air cushioning system.

Consisting of a portable, state-of-the-art converting machine and compact rolls of tubular polyethylene material, the AirSpeed™ 3000 system produces continuous chains of air-filled cushions of varying sizes for a variety of interior packaging applications. When and where you need it, sized to fit your particular needs.

- » Designed for significant cost savings in material, shipping, inventory and labour.
- » Tubular film allows for variable pillow sizing from the same roll.
- » Lightweight cushions reduce shipping weight and subsequent costs.
- » Cushions are 100% recyclable and reusable.
- » System reduces dedicated inventory space. Compressed material takes up less than 1% of its inflated volume.
- » Fully-automated technology requires little set-up, training and operator involvement.
- » Heavy duty film provides excellent air retention and puncture resistance.
- » Easily integrated with bespoke storage and Airspeed dispensing systems for high-throughput work environments.
