

AIRSPEED[®] HYBRID CUSHIONING (HC)

Pregis' hybrid cushioning is a high performance inflatable protective packaging solution produced on the AirSpeed HC Versa system.

The hybrid cushioning film is inflated forming a proprietary pattern of squares pillows that provide superior product protection and reduces material consumption. The HC film is engineered to produce strong, resilient seals and to resist puncturing.

The square pattern prevents items from damage or "bottoming out." The aesthetics of the packaging material provides a very positive experience for customers as the clean, transparent look is preferred among consumer oriented companies.

AirSpeed HC film is a versatile protective packaging solution for a wide variety of customer applications:

- 
- Clean, clear film and square pattern provides optimum aesthesis
 - Perfect for applications ranging from cushioning, block & brace, wrapping and void fill
 - Three cushion widths: 12", 18", 24" inflated
 - Three cushion heights: Small (3/4"), Medium (1"), Large (1 1/4")
 - Available in several film grades & formulations
 - Recyclable as category #4 (where accepted)

HC FILM OFFERING:

NEW! HC Performance Plus: Barrier film offering the **highest air retention** properties for heavy loads that require extended storage and shipping cycles

NEW! HC Performance: Barrier film designed for light weight shipments that require **extended storage and shipping cycles**

HC Standard Film: Robust film that is designed to perform across a broad spectrum of packaging requirements. Perfect for heavier shipments with **shipping cycles that range up to 10 days**

HC-Flex: Economy grade solution designed for light weight shipments with **short shipping cycles**

SPECIAL HC FILM FORMULATIONS:*

Renew: Available with a green tint to provide a visual cue for the sustainable properties.

NEW! Anti-Static: Includes an additive to **prevent static interference** when protecting electronics or other sensitive equipment. Film will have a pink tint to indicate it anti-static properties.

AIRSPEED HC VERSA

The proven high performance film and machine make the AirSpeed HC Versa systems the preferred solutions for block & brace and cushioning in the industry.

- Simple to load and operate
- Fast! Runs at 75' per minute
- No material waste at perforation
- Compact profile enables easy placement & flexibility for tight work spaces
- Compatible with a wide range of delivery system options and ergonomic solutions

*Select film grades are available in Renew or Anti-Static film formulations.
