

AIRSPEED[®] SMART[™] VOID FILL SYSTEM VALUE PROPOSITION

The Airspeed Smart is a convenient and cost-effective way to create inflatable cushions on-demand for compact or work-station packaging operations. The lightweight system offers portability, durability and functionality. With great ease, AirSpeed Smart turns flat, easy-to-store, high performance film into lightweight, non-abrasive void-fill cushioning for a variety of packaging needs.

Compact: At just 26 lbs., this small, self-contained unit is truly portable.

Easy to operate: Simply start/stop machine, load film and go!

Reliable: Machine is engineered for durability and low maintenance.

Versatile: Single system produces inflated cushions of varying lengths and air fill levels, customized to fit your needs.

Quiet: Suitable for small areas without interfering with conversation or on-going business.

Productive: Integrate with a Smart accessory for maximum productivity and ergonomics.

SMART FOR CUSTOMERS, SMART FOR THE ENVIRONMENT

The AirSpeed Smart offers multiple film options made from low density polyethylene (LDPE). Customers can expect a high quality, tough film with outstanding air retention and puncture resistance. Air pillows take up less space and are clean, neat and non-abrasive compared to alternatives such as loose-fill peanuts.

- Film yields up to 20% more void fill than competitive films due to minimum "skirt loss"
- High quality, tough film with outstanding air retention and puncture resistance.
- Lightweight and compact rolls means more film per truck and use fewer trucks for transport and less fuel needed for shipment.
- Recycling category #4. (where accepted)
- Sustainable film option includes a bio-additive to accelerate breakdown.

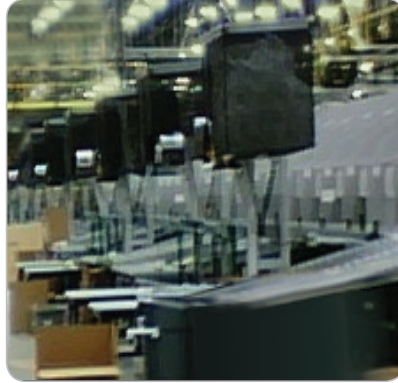

THINK SUSTAINABILITY, THINK PREGIS

AirSpeed Smart is an addition to the Pregis "green" family of products whose purpose is addressing the growing need for sustainable packaging alternatives. Environmentally responsible practices are an important part of Pregis' business philosophy.

CUSTOM SET-UPS

Pregis designs ergonomic delivery systems for maximum packaging efficiency.

THE PREGIS SYSTEMS OFFERING

INFLATABLE VOID-FILL SYSTEMS

AirSpeed® 5000 High Speed Void Fill System

- Fast! Runs at 75' per minute.
- Full functionality, yet quick to load, and easy to operate.
- Multiple sizes and grades of market leading film.
- Wider, true width film saves money.

PAPER PACKAGING SYSTEMS

Easypack® Quantum™ Paper Packaging System

- Fan fold and roll paper
- Telescoping head for improved ergonomics
- Power tear assist – bladeless cutting mechanism keeps operators safe
- Fast, compact, lightweight and portable
- Feed to length feature dispenses paper at varying lengths

INFLATABLE CUSHIONING SYSTEMS

AirSpeed HC Hybrid Cushioning System

- Fast! Runs at 75' per minute.
- Excellent film clarity and configuration.
- No material wasted at perforation.
- Adjustable air pressure and multiple film sizes.

ChamberPak™ Custom Cellular Cushioning

- One-step process reduces labor
- Saves warehouse space
- Reduced cubing saves freight
- Outstanding air retention, puncture resistance and cushioning
