

# Our Tailored Approach to Temporary Protective Films

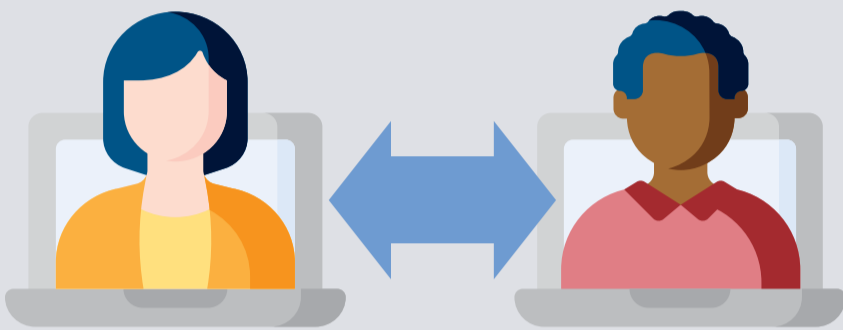

Pregis PolyMask™ protective films are a prime example of how Pregis applications engineers and sales consultants help customers find a solution that fits them like a glove. Here's more on how Pregis approaches the consultation process when collaborating with customers:

## Understanding the Customer Needs

Understanding how and where the film will be applied is critical. Pregis evaluates:

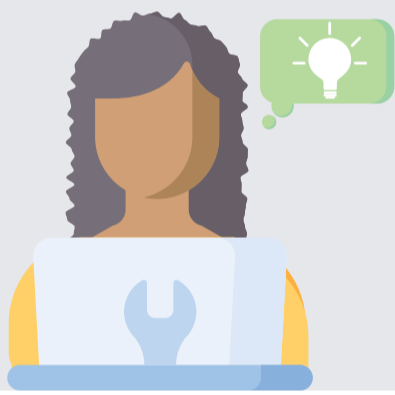

- Application(s) and its substrate
- Finish characteristics (i.e. polished metal vs. matte plastic)
- Hand or machine application
- Processing requirements (roll forming, drilling, punching, cutting)
- Transportation and environmental conditions
- The surface area of the product or material

## Sample Sessions

Our engineers create and develop trial options.

We review the customer's unique requirements and conduct trials in our lab.

## Analyze Results

Pregis engineers analyze findings.

After thorough scientific evaluation, Pregis provides samples for onsite testing.

## Identifying Potential Solutions

Pregis finishes a consultation with a trial process to validate the solution.

Our field team then works hand-in-hand with the customer to successfully integrate the film into the operation.

## Success!

Our unique approach provides you the optimal solution for your business at the lowest possible cost.
