

Automotive and Transportation Solutions Guide

Advanced packaging engineered to drive down
costs & fuel production

Automotive and Transportation Packaging Solutions

Pregis offers a full spectrum of packaging materials & solutions to help protect a wide range of parts, components and surfaces within the transportation marketplace. Our mission is to deliver superior protection, labor and production efficiencies so you can ultimately protect your bottom line. Our consultative approach evaluates the manufacturing and supply chain process to recommend the best solution for your operations. At Pregis, our goal is to not only protect your product, but your brand & reputation, as well.

- Containment & Wrapping** for component and parts shipping: Applications that require protective encapsulation, abrasion resistance and cushioning support.
- Surface & Edge Protection** for products with delicate finishes and surfaces that abrade, scratch or mark easily: Wide spectrum of protective films and wrapping materials carefully matched to your surface needs to prevent damage during manufacturing, assembly and transport.
- Cushioning** to prevent damage caused by shock and vibration: Versatile range of cushioning products provide protection from unavoidable motion and vibration between the packaging and its contents. Available in on demand and ready-to-use forms.
- Block & Brace** to lock items into position and prevent unwanted or damaging movement. Customized and scalable solutions to create productivity gains.
- Void Fill** to limit movement inside the box when shipping parts and components: On demand solutions offer an efficient and easy-to-use solution to prevent products from shifting during transport or handling.

- A Bumpers
- B Door Handles
- C Engines & Components
- D Exterior Mirrors
- E Headlights
- F Nameplates
- G Taillight Assemblies
- H Wheels
- I Windshields

PREGIS PACKAGING SOLUTIONS

Engineered for Maximum Protection

IntelliPack® Foam in Place Systems provide the highest degree of product protection. It is perfect for heavy, high value or odd shaped automotive parts. Foam-in-place efficiently creates a custom fit, protective shell to lock automotive parts into place to eliminate damage.

PolyPlank® closed-cell polyethylene (PE) plank foam is both resilient and non-abrasive. The foam is fabricated to your needs to provide excellent shock and vibration protection during transport.

Pregis PolyMask® Protective Films are designed to protect interior and exterior details on all types of vehicles from scratching, marring & abrading. Pristine interiors, flawless paint, chrome that gleams, lights and lenses that are damage free, clear and clean - in the world of transportation, every detail reflects on your reputation and temporary protective films protect these critical surfaces.

AirSpeed® inflatable on demand packaging solutions are available in high performance cushioning options to accommodate a wide range of shipping needs. Perfect for inside the box protection, improving packaging line efficiency while minimizing labor and packaging costs.

Easypack® Paper Packaging provide consistent, reliable paper cushions that nestle around the automotive product and limit movement. The 100% recycled, recyclable and biodegradable paper is a great option for environmentally conscientious customers.

Additional Applications

- Bumper guard solutions provide surface protection and cushioning
- Automated packaging and bagging systems for small parts and components
- Shipping supplies: Bubble, foam, mailers and pouches
