

# Medical Shield

## Protective Solutions

Personal protective equipment (PPE) is imperative for emergency, primary & critical care personnel to deliver safe treatment to patients. To ensure the quality and integrity of this equipment, it must be fully protected from damage – such as scratching & marring – during shipping & transit.

Pregis PolyMask's temporary protective **film solutions are engineered to safeguard facial shields** so the medical community can do their job.

### Monolayer Protective film solutions available for medical shields:

| Product     | Description | Color      | Coating Release       | Tack Level | Application |      |
